Algebraic Codes for Data Transmission by Richard E. Blahut One way to verify this is to compute the product cHT for an arbitrary codeword $c = [x;y;z]: [xyz] \begin{bmatrix} 2 & 4 & 1 & 0 & 0 & 1 & 1 & 1 & 3 & 5 \end{bmatrix} = [x+z;y+z]$ So, $c = [xyz]$ is a valid codeword if $cHT = 0$, ie. if $[y+z;x+z] = [0;0]$.

Introduction to Algebraic Coding Theory

The term algebraic coding theory denotes the sub-field of coding theory where the properties of codes are expressed in algebraic terms and then further researched. [citation needed] Algebraic coding theory is basically divided into two major types of codes: [citation needed] Linear block codes; Convolutional codes; It analyzes the following three properties of a code - mainly: [citation needed]
