Biochemistry is a branch of science concerned with the chemical and physicochemical processes and substances which occur within living organisms. Molecular biology is the branch of biology that deals with the structure and function of the macromolecules (e.g. proteins and nucleic acids) essential to life.

### What is the Difference Between Biochemistry and Molecular ...

Introduction. Biochemistry is the chemistry of life. It includes or has large areas of overlap with molecular biology, biophysics, structural biology, cell biology, metabolism, neuroscience, nutrition, genetics, etc. It tries to explain what happens in living organisms and how biological processes are regulated.
