Just as the use of technology itself has evolved, so has the ability to bully. Bullying, once restricted to the school or neighborhood, has now moved into the online world. Bullying through electronic means is referred to as “cyberbullying.” As adults, thinking back, it was just a generation ago that kids and teens were asking their parents for a phone in their room — maybe even one with ...

Cyberbullying - National Bullying Prevention Center - PACER

Background: Cyberbullying is well-recognized as a severe public health issue which affects both adolescents and children. Most extant studies have focused on national and regional effects of cyberbullying, with few examining the global perspective of cyberbullying. This systematic review comprehensively examines the global situation, risk factors, and preventive measures taken worldwide to

Australia and New Zealand. Cyberbullying has been defined as 'deliberately using digital media to communicate false, embarrassing or hostile information about another person' (O'Keefe and Clarke-Pearson, 2011). The Australian Human Rights Commission has said that such bullying is ...

The impact of media and digital technology on children and adolescents

While this literature generally suggests that past events can have material consequences for subsequent generations (Collins and Margo, 2001; Heckman and Payner, 1989), few studies target health outcomes or health disparities. Applying intergenerational drag approaches to the study of health disparities could help to clarify how contemporary mechanisms, baseline differentials between groups ...

Available treatment methods have shown little effect on the burden associated with mental health disorders. We review promising universal, selective, and indicated preventive mental health strategies that might reduce the incidence of mental health disorders, or shift expected trajectories to less debilitating outcomes. Some of these interventions also seem to be cost-effective. In the ...
