AIDS & HIV Textbooks - Textbooks.com

If left untreated, HIV usually progresses to AIDS (also known as stage 3 HIV) in about 10 years, although some people never develop AIDS despite never having treatment. A person is said to have AIDS when their CD4 count (a protein found on the surface of immune cells) falls below 200 (or the CD4 percentage falls below 14%) or when they develop certain opportunistic infections or cancers.
