dichotomous key used to identify fish families first lists the specific observable traits or characteristics of many fish species. For each trait, the key poses a question with two possible answers. Both responses lead to another question. By matching the option or answer to each question to the fish's features, the user can eventually identify the family to which the fish belongs.

Using a Key for Fish ID

This is a list of common fish names. While some common names refer to a single species or family, others have been used for a confusing variety of types; the articles listed here should explain the possibilities if the name is ambiguous.

List of fish common names - Wikipedia

4. Again select the statement that describes the fish you picked. Continue through the key until you come to a name after one statement. This should be the name of the fish you picked. 5. Practice using the key to identify several of the fish shown Example: Suppose you want to find the name of fish 2. Look at the classification key. Note that

Using a Dichotomous Classification Key to Identify Common ...

Dichotomous keys can be created for saltwater or freshwater fish or more specifically for a single type of fish such as sharks or tuna. For example, there are about 28 families of fish in the Great Lakes that number about 160 species. Minnows alone have some 62 species.
