Prestressed concrete is a form of concrete used in construction. It is substantially "prestressed" during production, in a manner that strengthens it against tensile forces which will exist when in service.: 3-5 This compression is produced by the tensioning of high-strength "tendons" located within or adjacent to the concrete and is done to improve the performance of the concrete in service.

For me, latex concrete repair caulk always shrunk/hardened/cracked. I used a roofing nail to punch a hole right above the bottom rim of the can, I put an air hole in the lid, and I could fill tiny cracks in concrete. First I put a little crushed rock in larger gaps. I put the nail back in the hole to stop it. I used half a gallon for more than 30 feet of crack. I suggest a piece of stiff wire ...
