How does it work? A heat pump works on the same principle as a refrigerator, but instead of pumping heat out of the fridge to keep it cool, they pump heat into the water. Electricity is used to pump a refrigerant through the system. The refrigerant transfers the heat absorbed through the air to the water in the tank. Diagram 1.

U.S. crude oil prices are up more than 60% this year. That's lifted gasoline prices to all-time highs, averaging \$6.46 in Los Angeles and \$5.20 in New York.

"Many people could make minor changes to their lifestyle," said Randy Frederick, managing director of trading and derivatives at the Schwab Center for Financial Research.
